Business Ethernet
Dedicated performance for your business

An increasing number of businesses are using and downloading information from the Internet, running online business applications, uploading content to customers, and taking advantage of cloud-based voice and computing platforms. With Business Ethernet, you get dedicated and guaranteed bandwidth for your mission critical applications, improved business productivity and customer service.

WHY BUSINESS ETHERNET?

Bandwidth for your business is guaranteed and dedicated, unlike DSL or cable which is shared. This enables you to work faster with your customers without the hassles of fluctuating performance.

With Business Ethernet, your data transfer is symmetrical, so you get the same speeds uploading as you do downloading.

Business Ethernet can deliver speeds of up to 40 Mbps, and can scale to meet the data access needs of your business today and tomorrow.

BUSINESS ETHERNET ADVANTAGES

HIGHER PERFORMANCE AT REDUCED COST – There's no need for expensive construction to install new lines. We use existing telecom infrastructure to provide the performance of fibre at prices that are more affordable than traditional services.

GET IT WHEN YOU NEED IT – Business Ethernet installs in just weeks and is scalable to meet your growing needs with bandwidth upgrades in just days.

UNLIMITED BANDWIDTH = NO USAGE FEES OR DATA CAPS – Business Ethernet offers bandwidth ideal for multimedia and cloud based applications.

REDUNDANCY BUILT-IN – Business Ethernet utilizes the existing telecom infrastructure making it reliable and sustainable by bonding multiple loops.

CONSISTENT INTERNET AND DATA ACCESS QUALITY – Business Ethernet delivers high-performance with reliable upload and download speeds at a fraction of the cost of fibre, while providing higher speeds than T1 lines. Faster speed equates to faster Internet and data access and increased productivity.

ACCESS TODAY MEETS TOMORROW'S TECHNOLOGY – Consistent high-speeds and reliability means businesses can confidently and cost-effectively keep up with innovative technologies like cloud communications, VoIP and videostreaming.

BUSINESS ETHERNET

Business Ethernet is an enterprise-grade data access service delivered over the Primus network using Ethernet-in-the-First-Mile technology.

This provides increased speeds and redundancy by bonding multiple lines. It's like having a spare tire that changes itself so you can continue to drive unhindered while the spare is replaced.

Connection Type	ADSL	SDSL	T1	Bonded TI	Business Ethernet*
Upload Speed	Up to 800 Kbps	Up to 2.3 Mbps	1.5 Mbps	3 Mbps	Up to 40 Mbps
Download Speed	Up to 6 Mbps	Up to 2.3 Mbps	1.5 Mbps	3 Mbps	Up to 40 Mbps
